

```
f = open('myfile.txt')
```

Open a file for reading.

```
f = open('myfile.txt', 'w')
```

Open a file for writing.

```
f.close()
```

Close a file.

```
f.readline()
```

Read a line without using **with**.

```
f.readlines()
```

Read all lines without using **with**.

```
f.write(text)
```

Writing to file without using **with**.

```
with open('text.txt') as f:  
    lines = f.readlines()
```

Safe reading from a file (it closes when the block is finished).

```
with open('abc', 'w') as f:  
    f.write('ahoj')
```

Safe writing to a file (it closes when the block is finished).

```
with open('test.txt') as f:  
    line = f.readline()
```
